

Synthesis: Context Infrastructure for AI Agents

Bridging the gap between Agent Intelligence and System Reality.

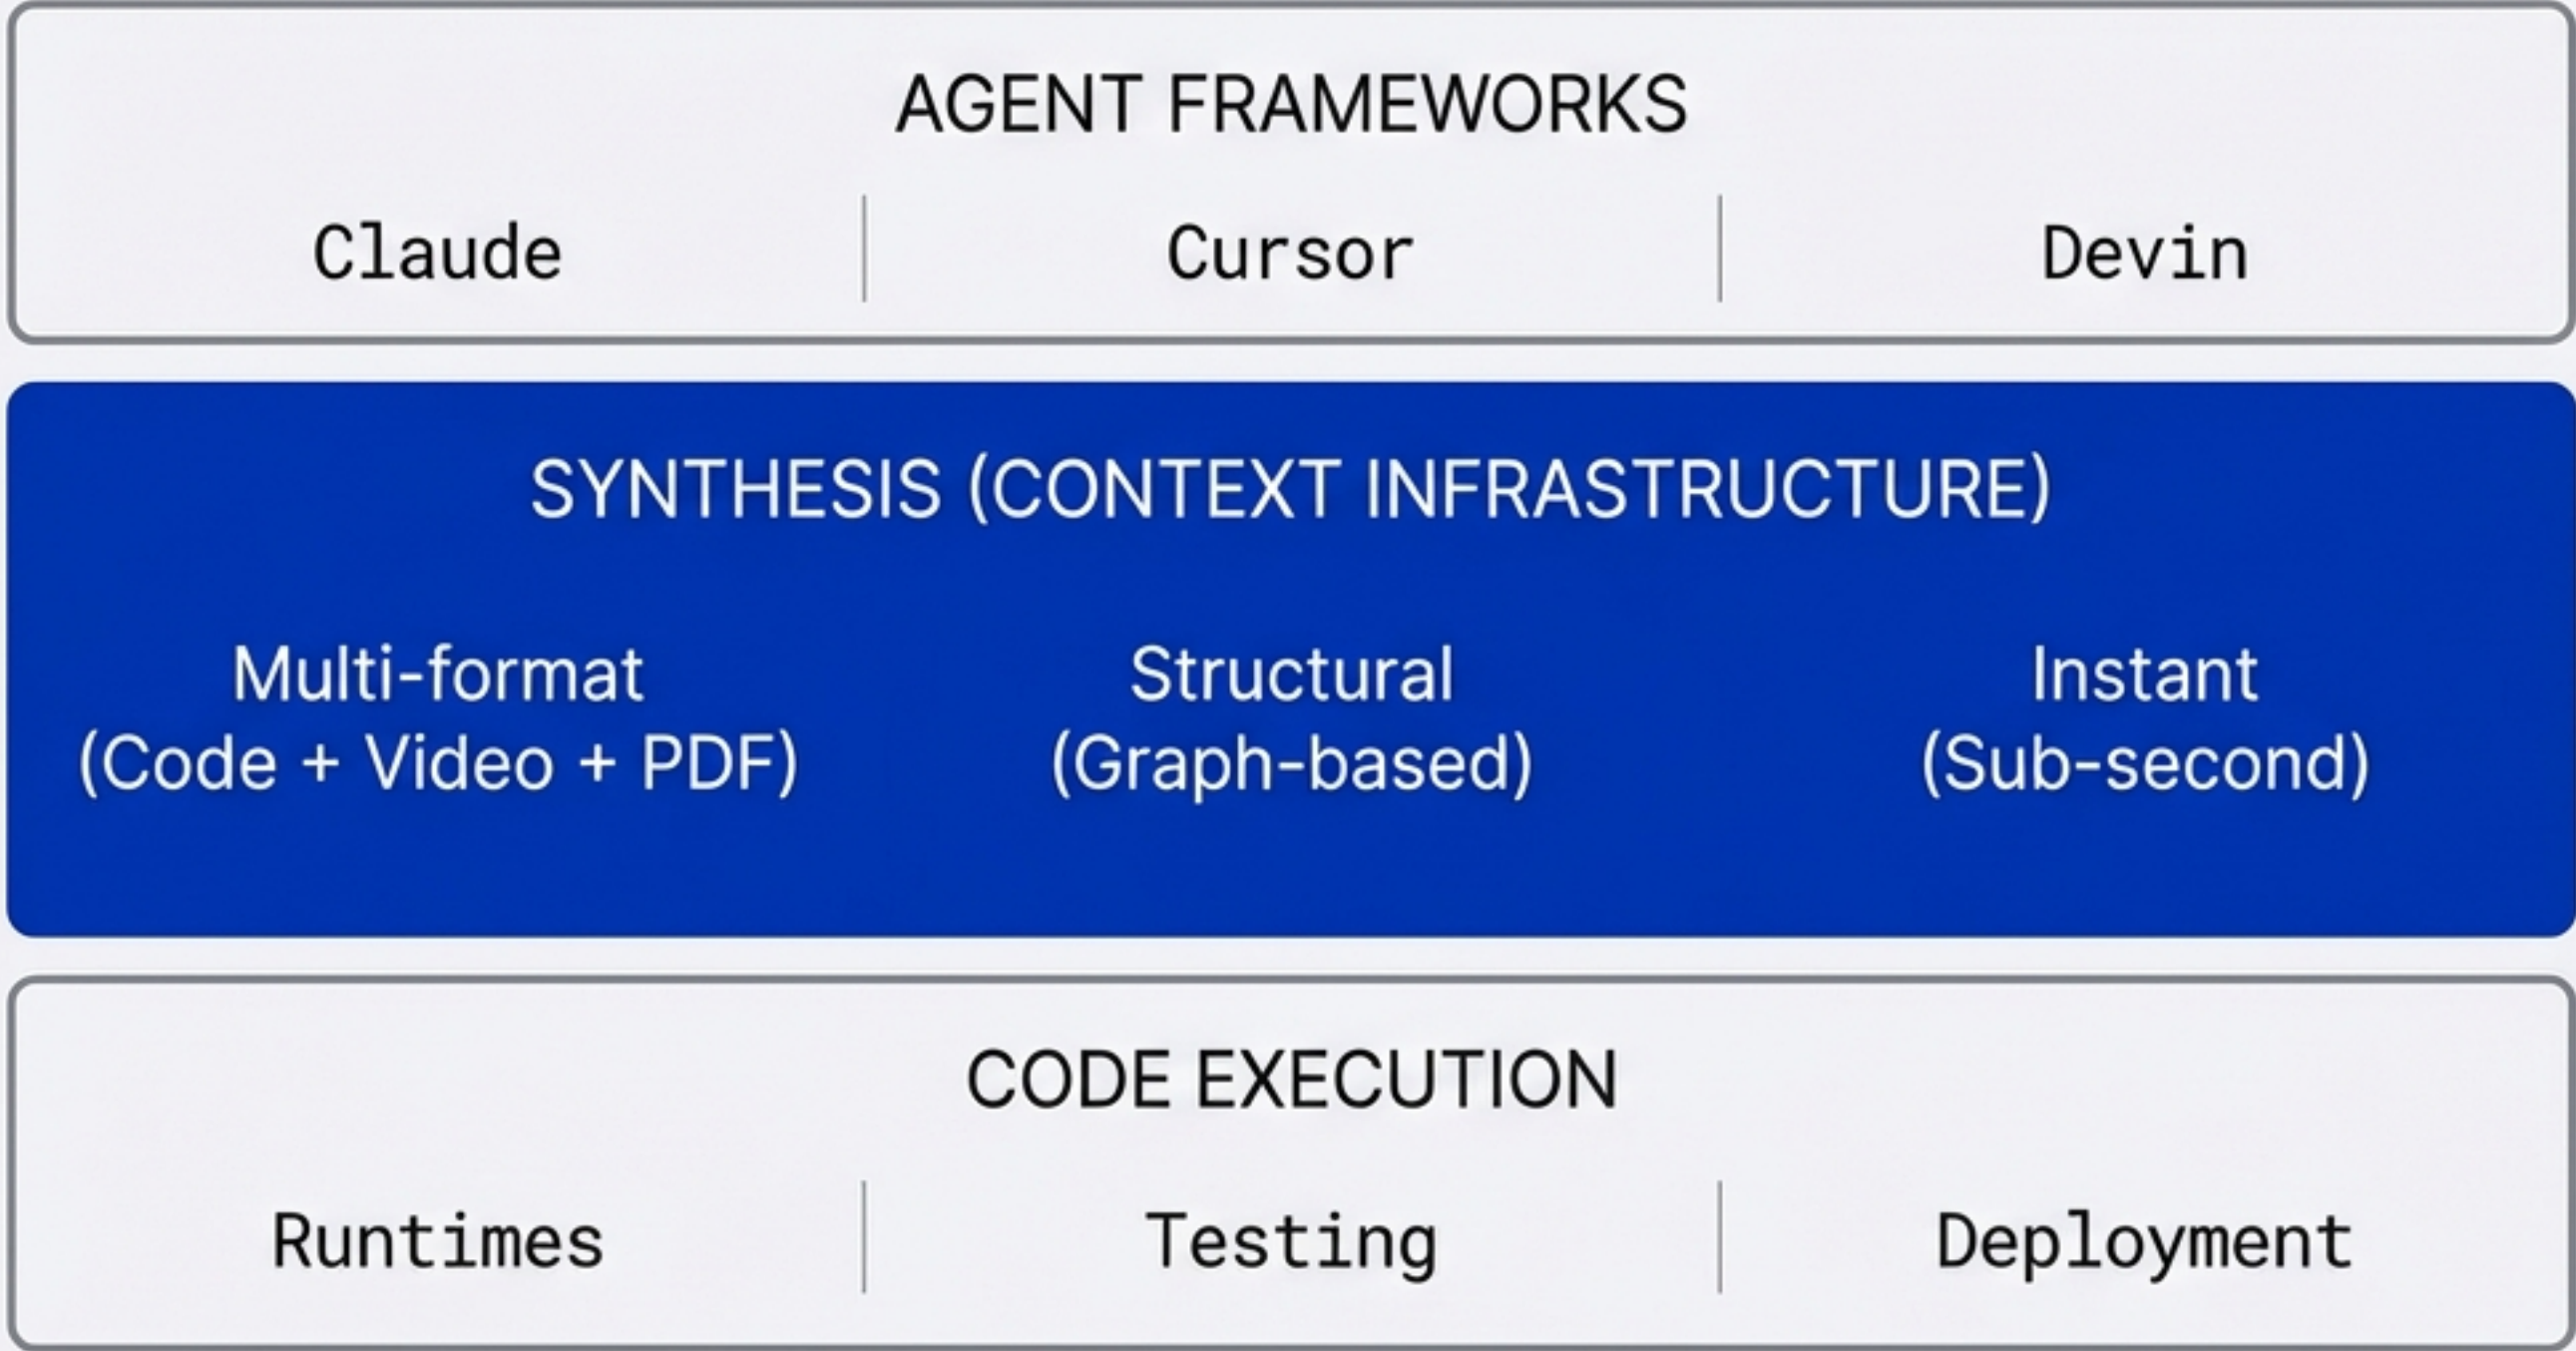

The Agent Context Problem

Agents operate blind in complex environments.

Complete, Structural Context at Agent Speed

Core Capabilities

1. **Search:** Sub-second access to code, docs, and rich media.
2. **Relate:** Instant mapping of 13+ connections per file.
3. **Graph:** Full architecture awareness, not just file awareness.

Use Case: Autonomous Refactoring

Scenario: Refactoring an authentication service used by 8 microservices.

WITHOUT SYNTHESIS

Grep Search

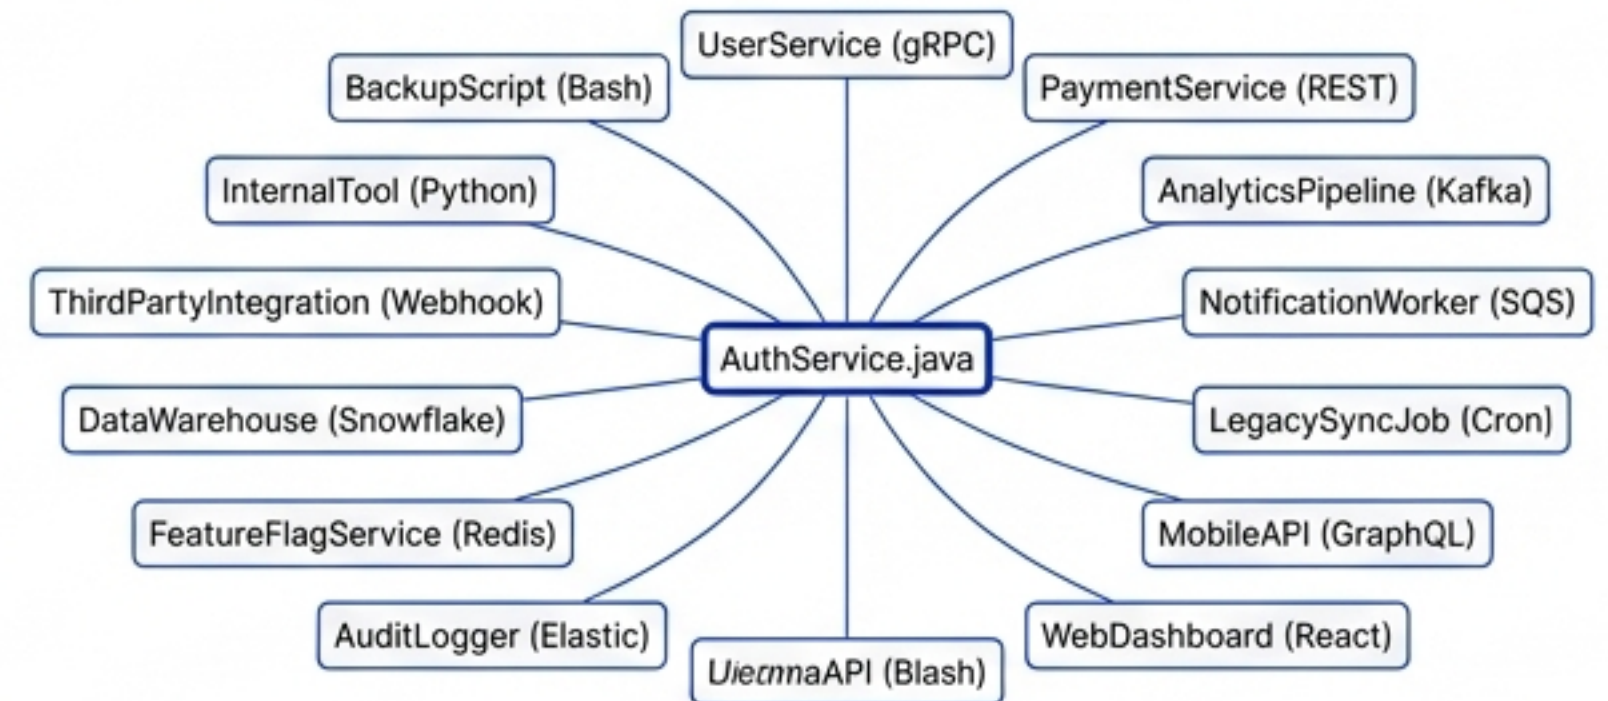

```
grep "AuthService" /src -r
/src/user/profile.ts:23: import { AuthService } from '../auth/AuthService';
/src/billing/invoice.py:12: from auth_service import AuthService
/src/notification/email.go:45: auth := &AuthService{}
/src/reports/generator.java:38: import com.company.auth.AuthService;
/src/legacy/sync.sh:5: curl -X GET http://auth-service/validate
```

Missed Dependencies: 5

38% BREAKAGE RATE

WITH SYNTHESIS

synthesis relate 'AuthService.java'

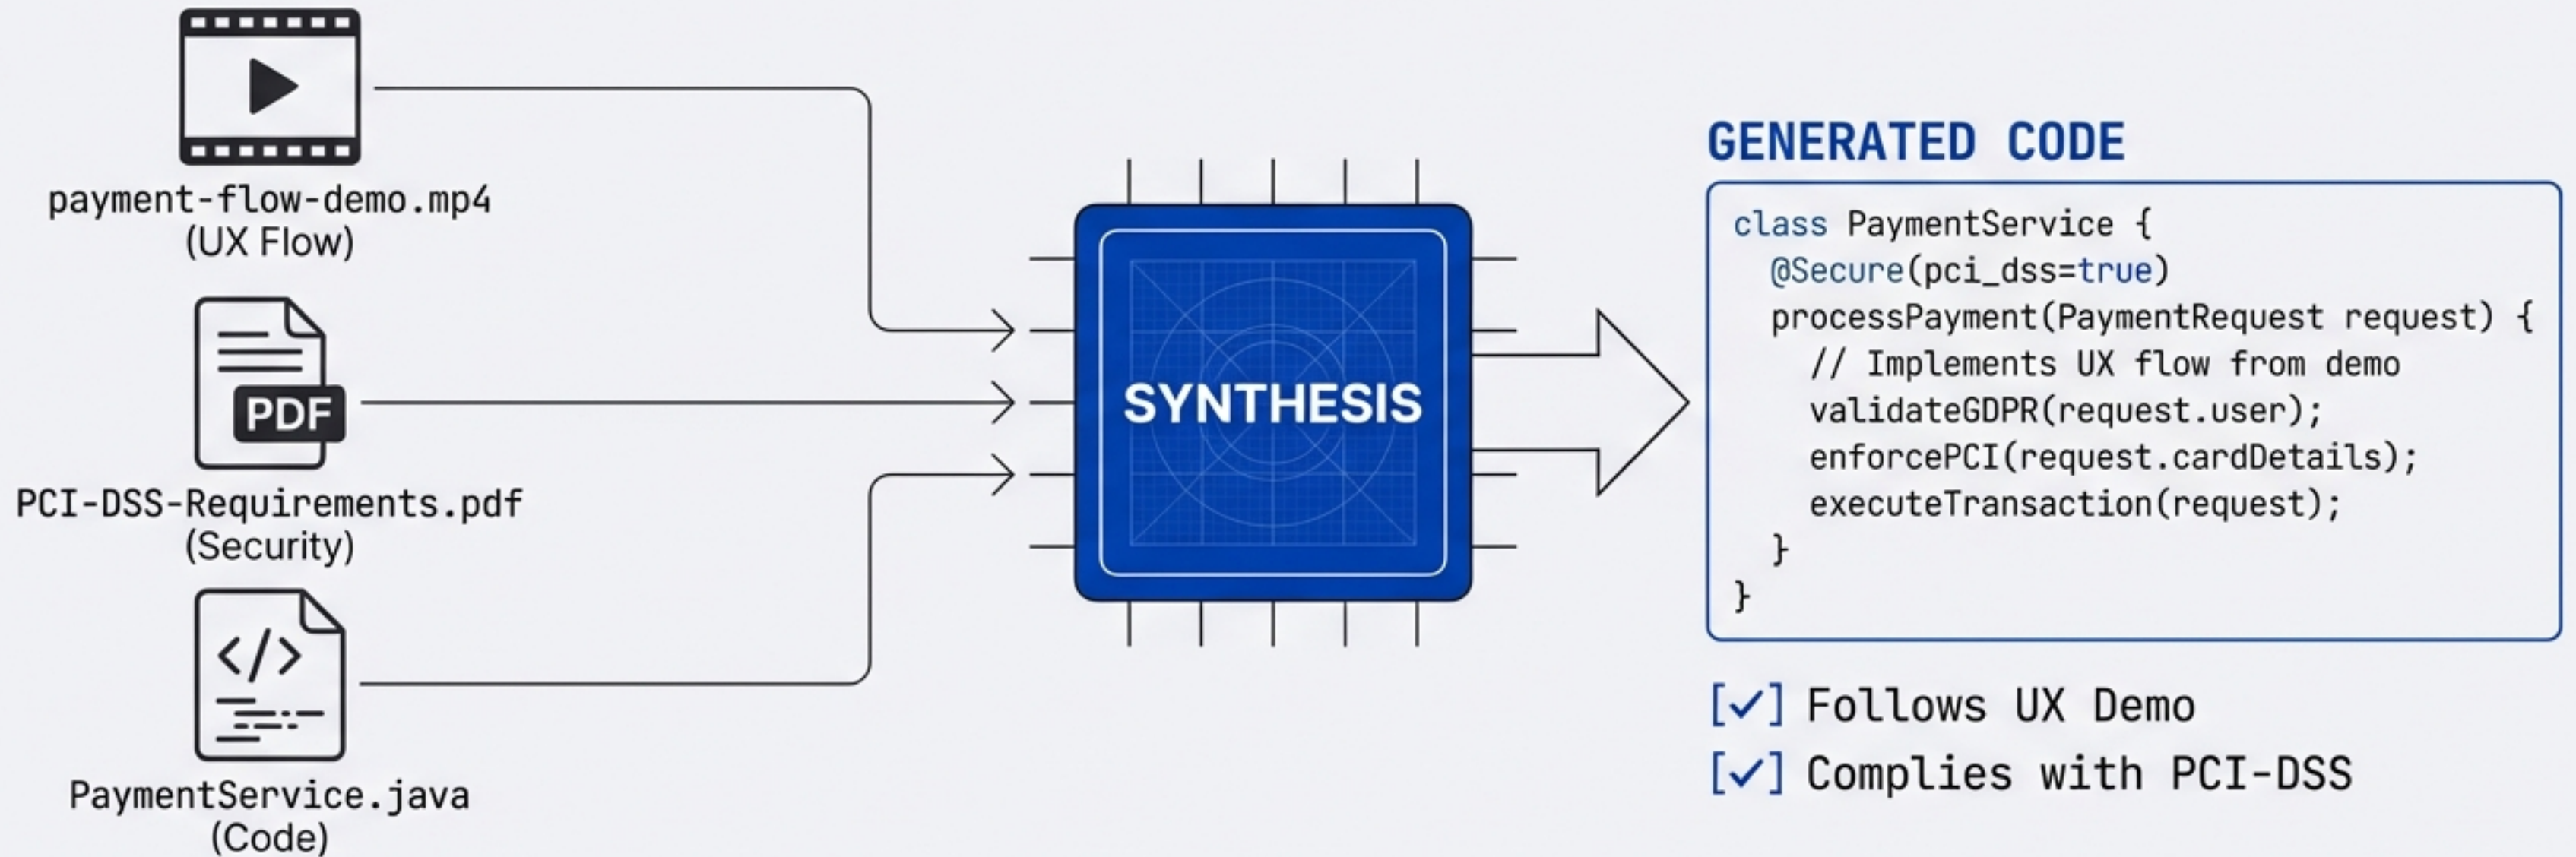

Full Dependency Map: 13 Connections

ZERO SURPRISE BREAKAGES

Success Rate: 99%+ with Synthesis vs. 60-70% without.

Use Case: Documentation-Aware Development

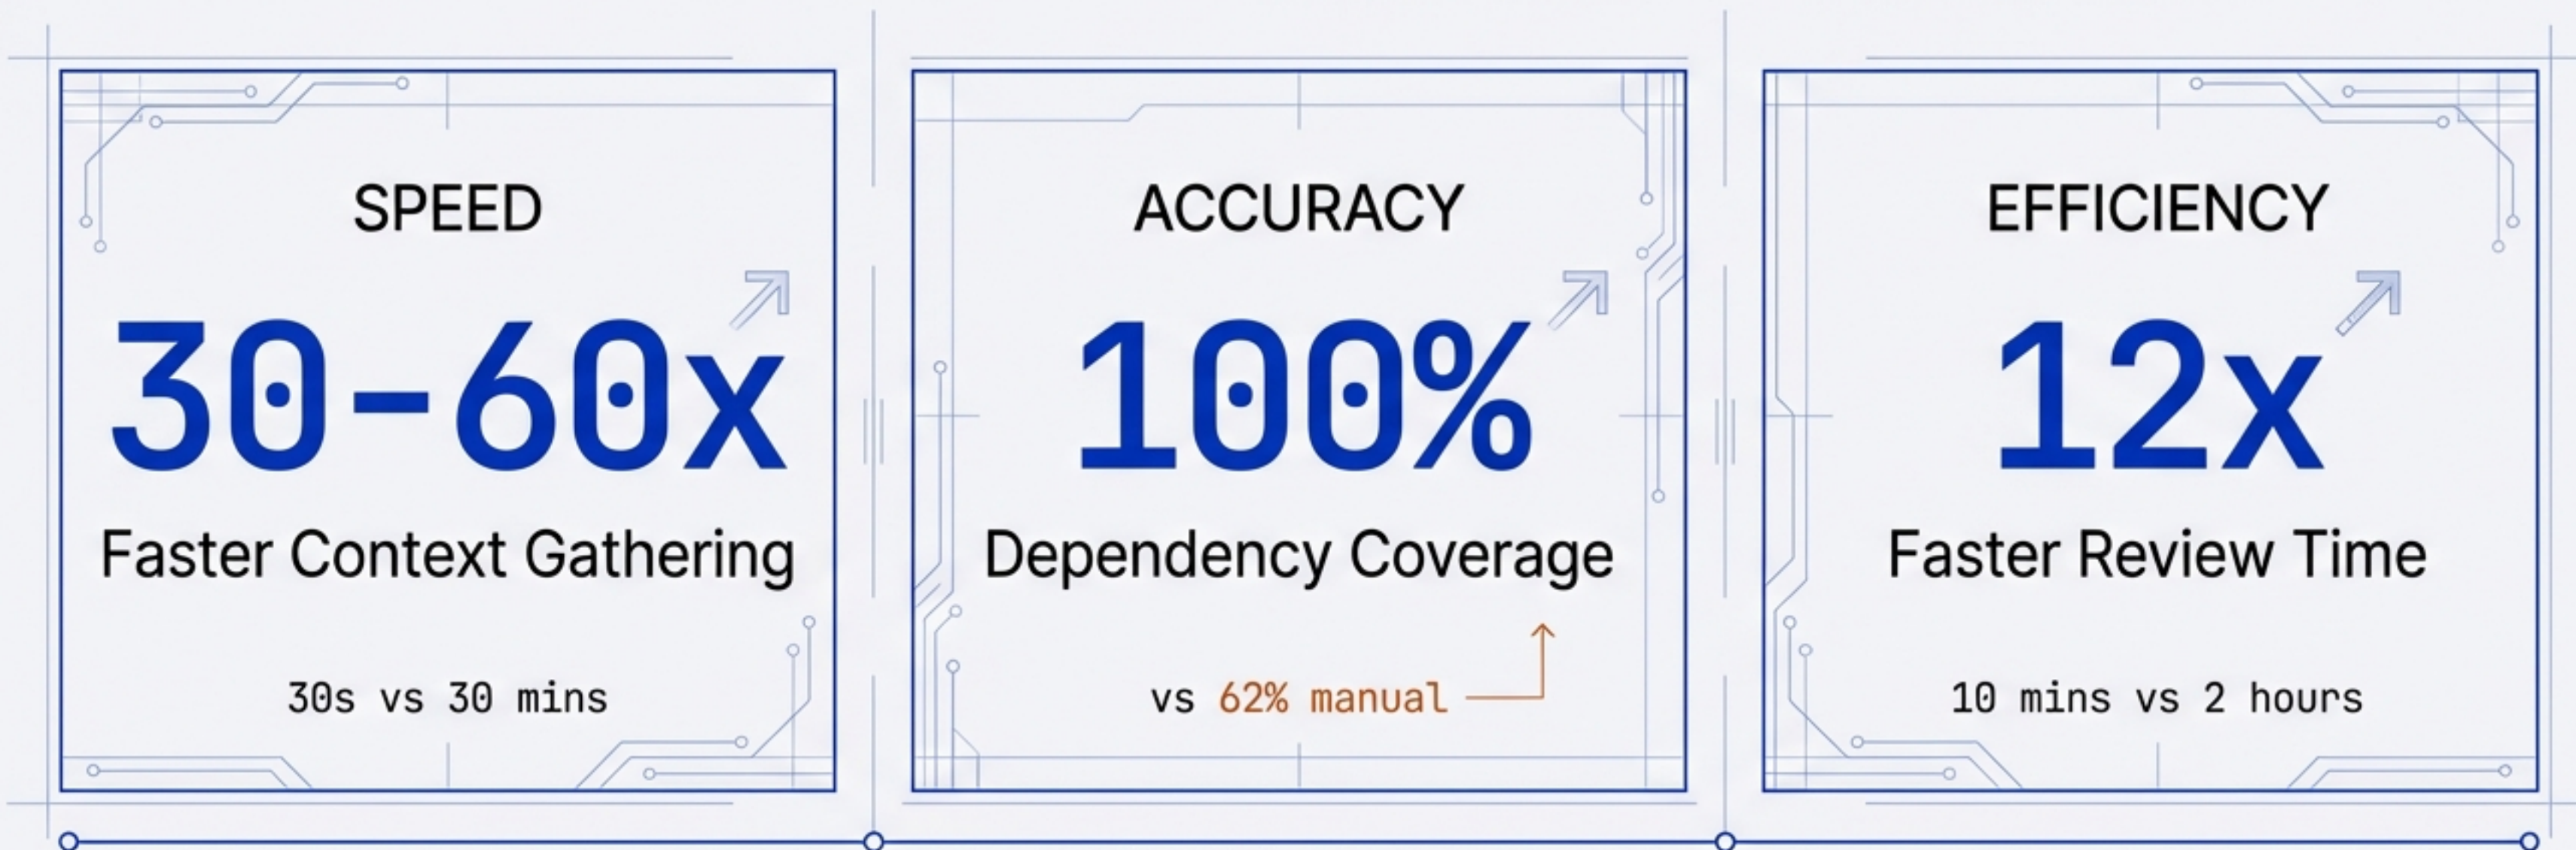

Scenario: Implementing payment features subject to GDPR and PCI constraints.

100% POLICY COMPLIANCE vs 60% BASELINE

Zero 'You missed the ADR' comments. Zero security policy rejections."

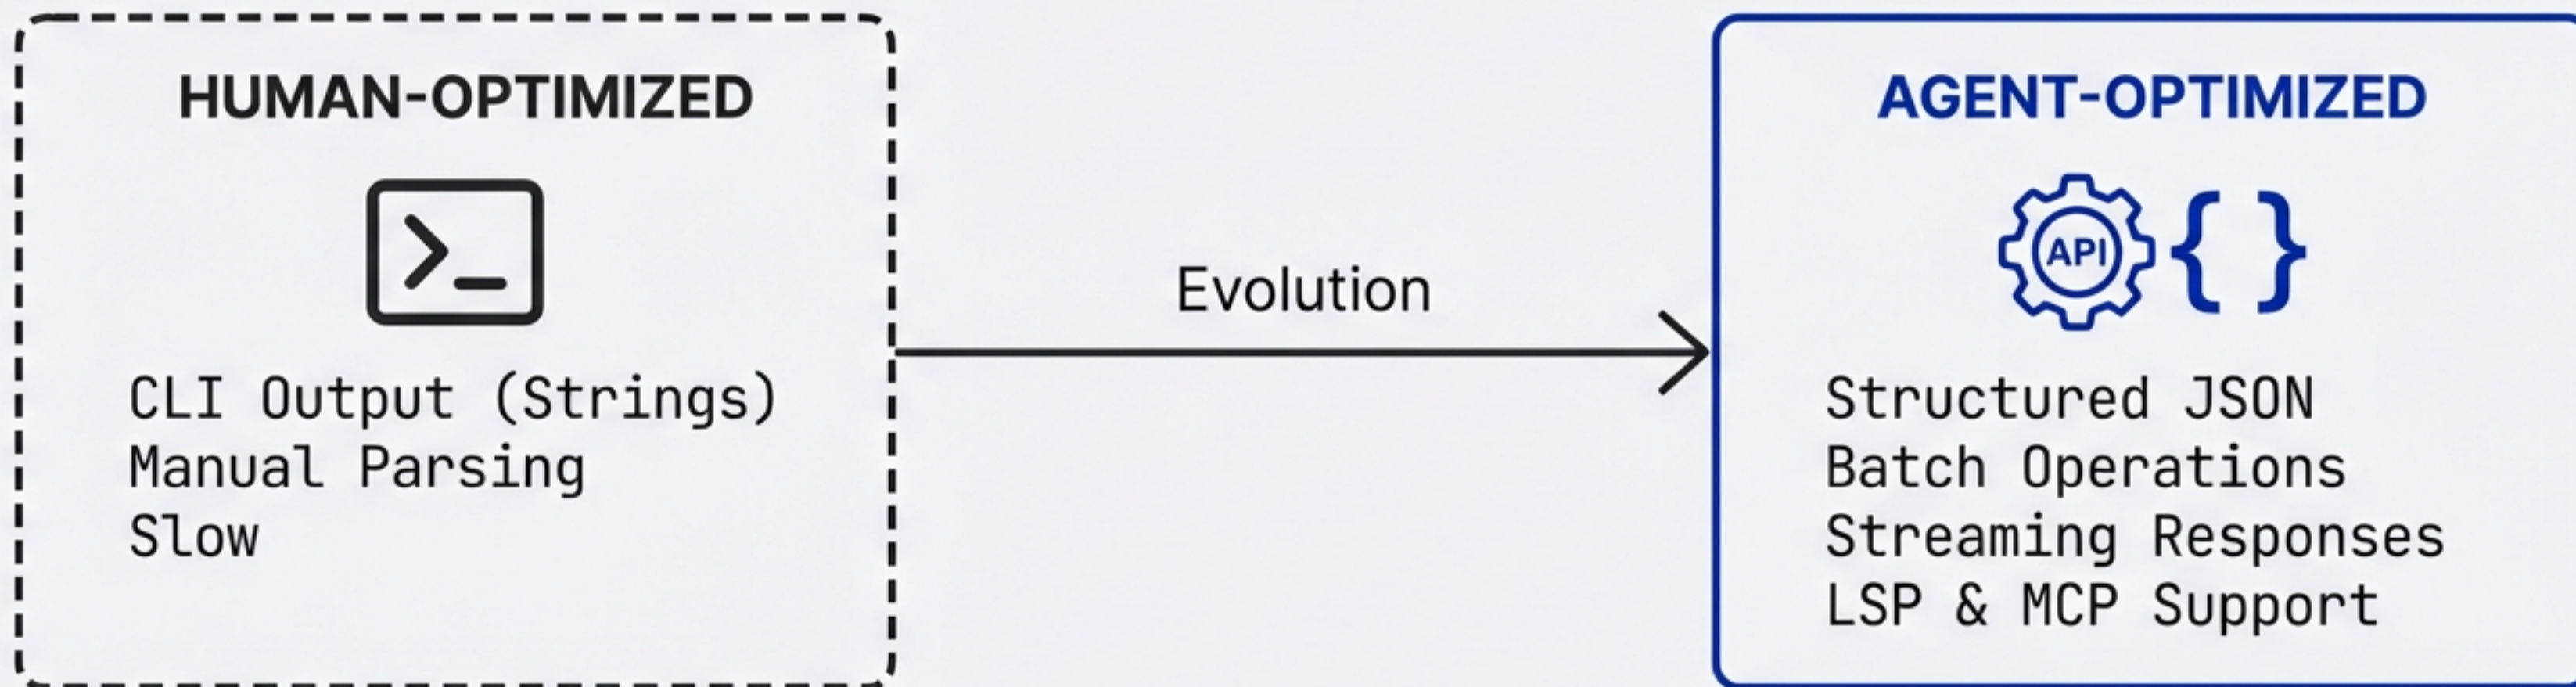

The ROI of Context

Agents with complete context don't just work faster—they work correctly the first time.

Architecture: Optimized for Machines

Moving from human-readability to machine-readability.

Performance: 0.4 seconds to search 10,000 files.

Agents don't wait.

Integration Patterns

Direct CLI

For custom pipelines & Python wrappers.

LSP (Language Server)

For IDEs. Hover over code to see the graph.

MCP (Model Context Protocol)

Native integration for Claude.

```
{  
  "name": "synthesis",  
  "tools": ["search", "relate", "graph"]  
}
```

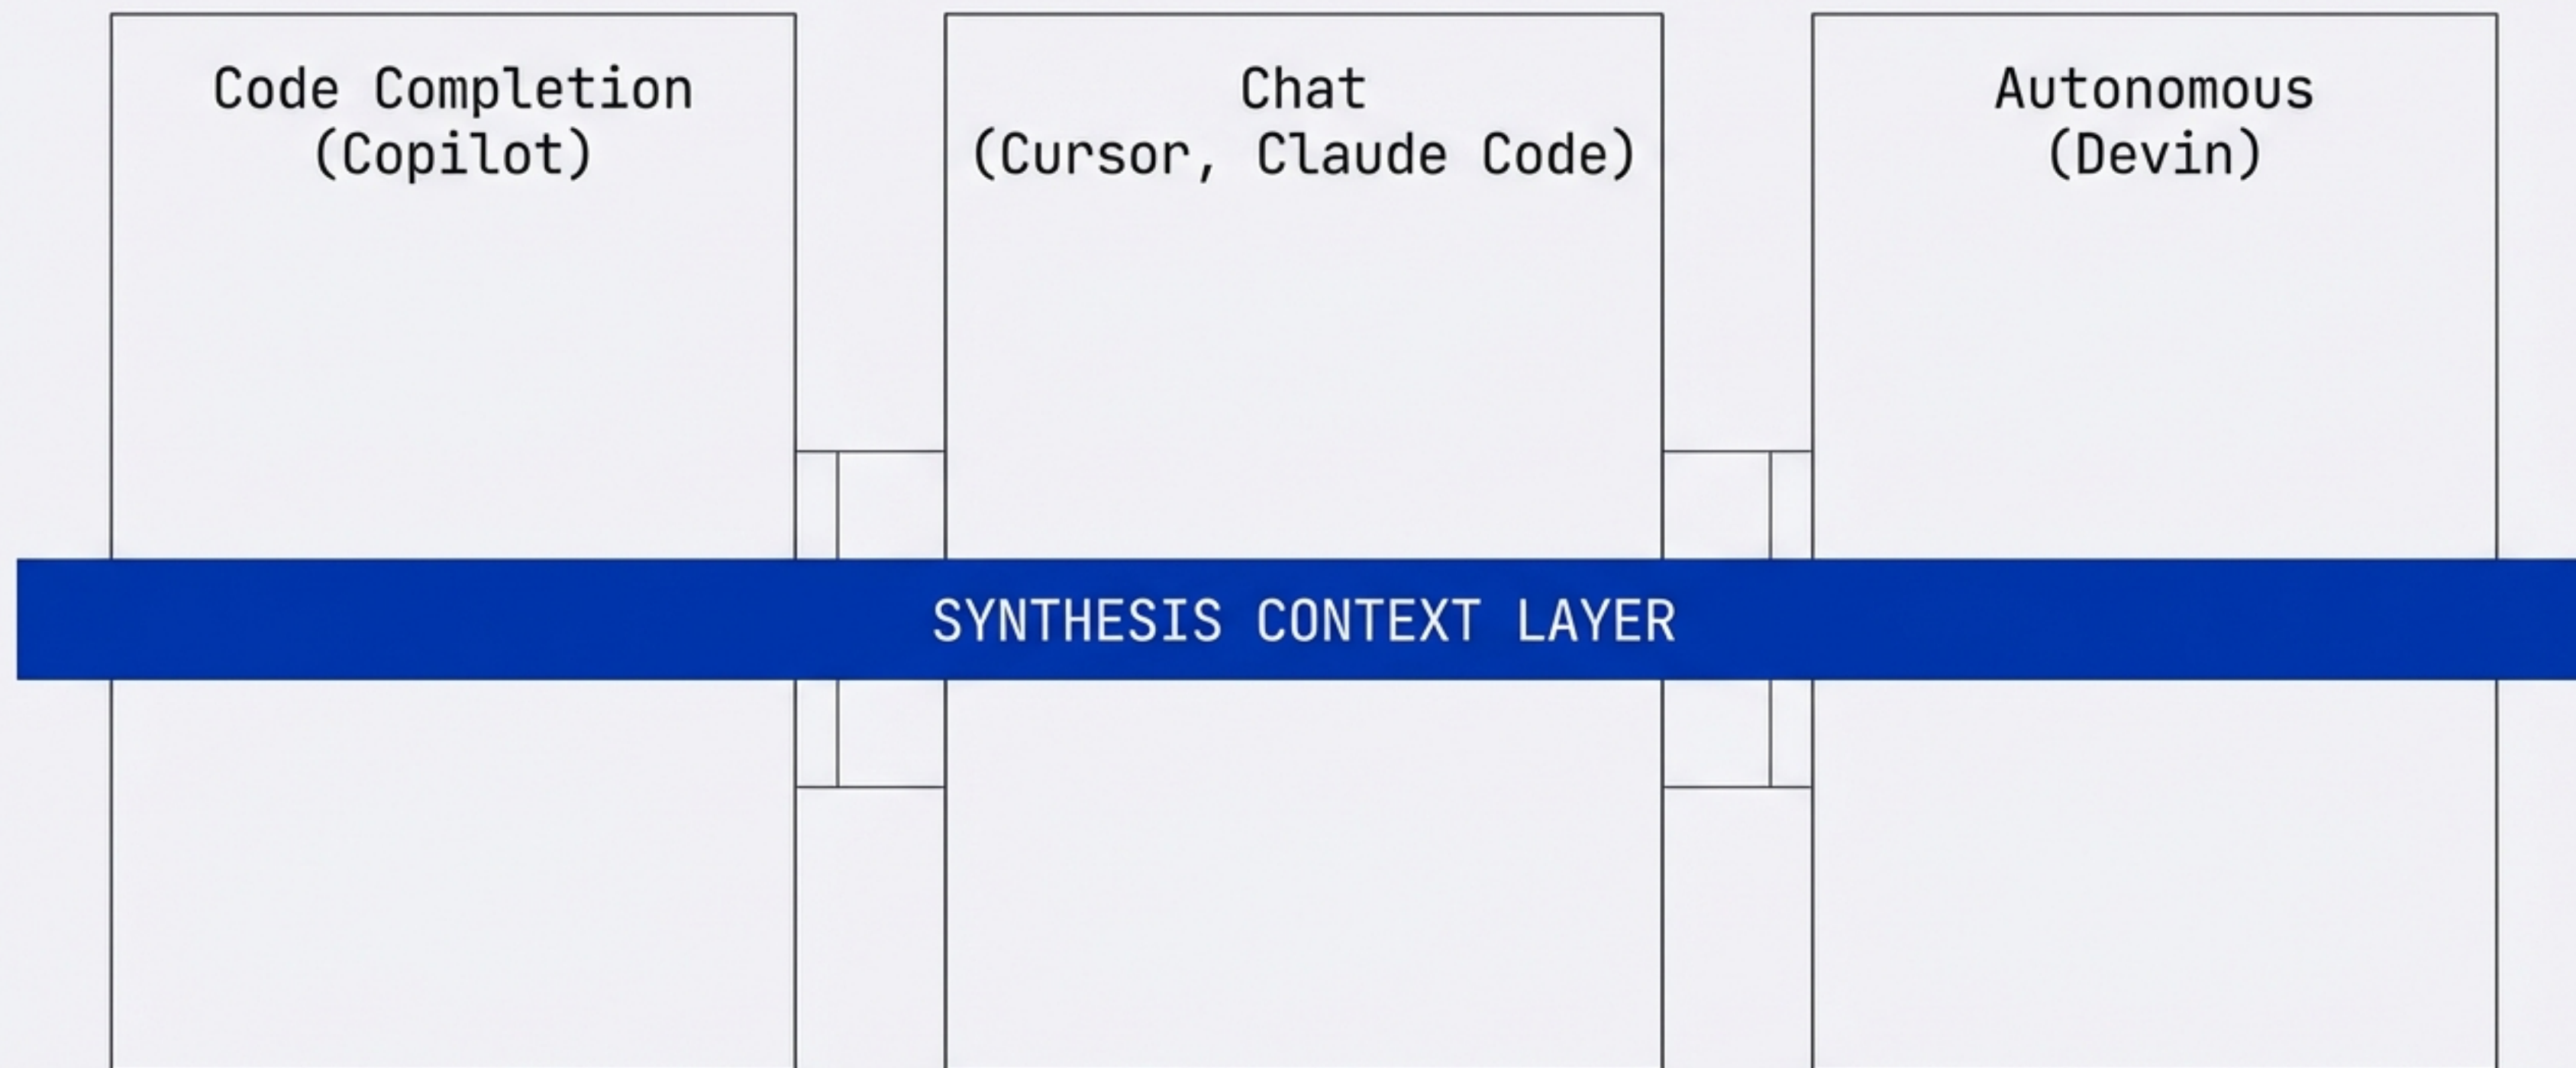

Plug-and-play context for the entire agent ecosystem.

The Competitive Moat

	Speed	Structure	Multi-Format	Cost
Vector DBs (Embeddings)	<u>Slow Indexing</u>	<u>Semantic Guessing</u>	<u>Text Only</u>	<u>High \$\$\$</u>
Git Analysis	<u>Slow Parsing</u>	<u>Historical Only</u>	<u>Code Only</u>	<u>High Token Cost</u>
SYNTHESIS	Real-time (Sub-second)	Structural Truth	Code + Video + PDF	Low Cost

Vector DBs guess relevance. **Synthesis** maps reality.

Market Landscape (2026)

The Gap: All three verticals struggle with context. Synthesis fills this horizontal gap for the entire industry.

Business Models & Revenue

Total Addressable Market: \$700M by 2027

Platform
Partnerships
B2B2C

Rev-share with Claude/Cursor

\$150M
Opportunity

Enterprise Infra
B2B

On-prem security/compliance

\$500M
Opportunity

API Services
Usage-Based

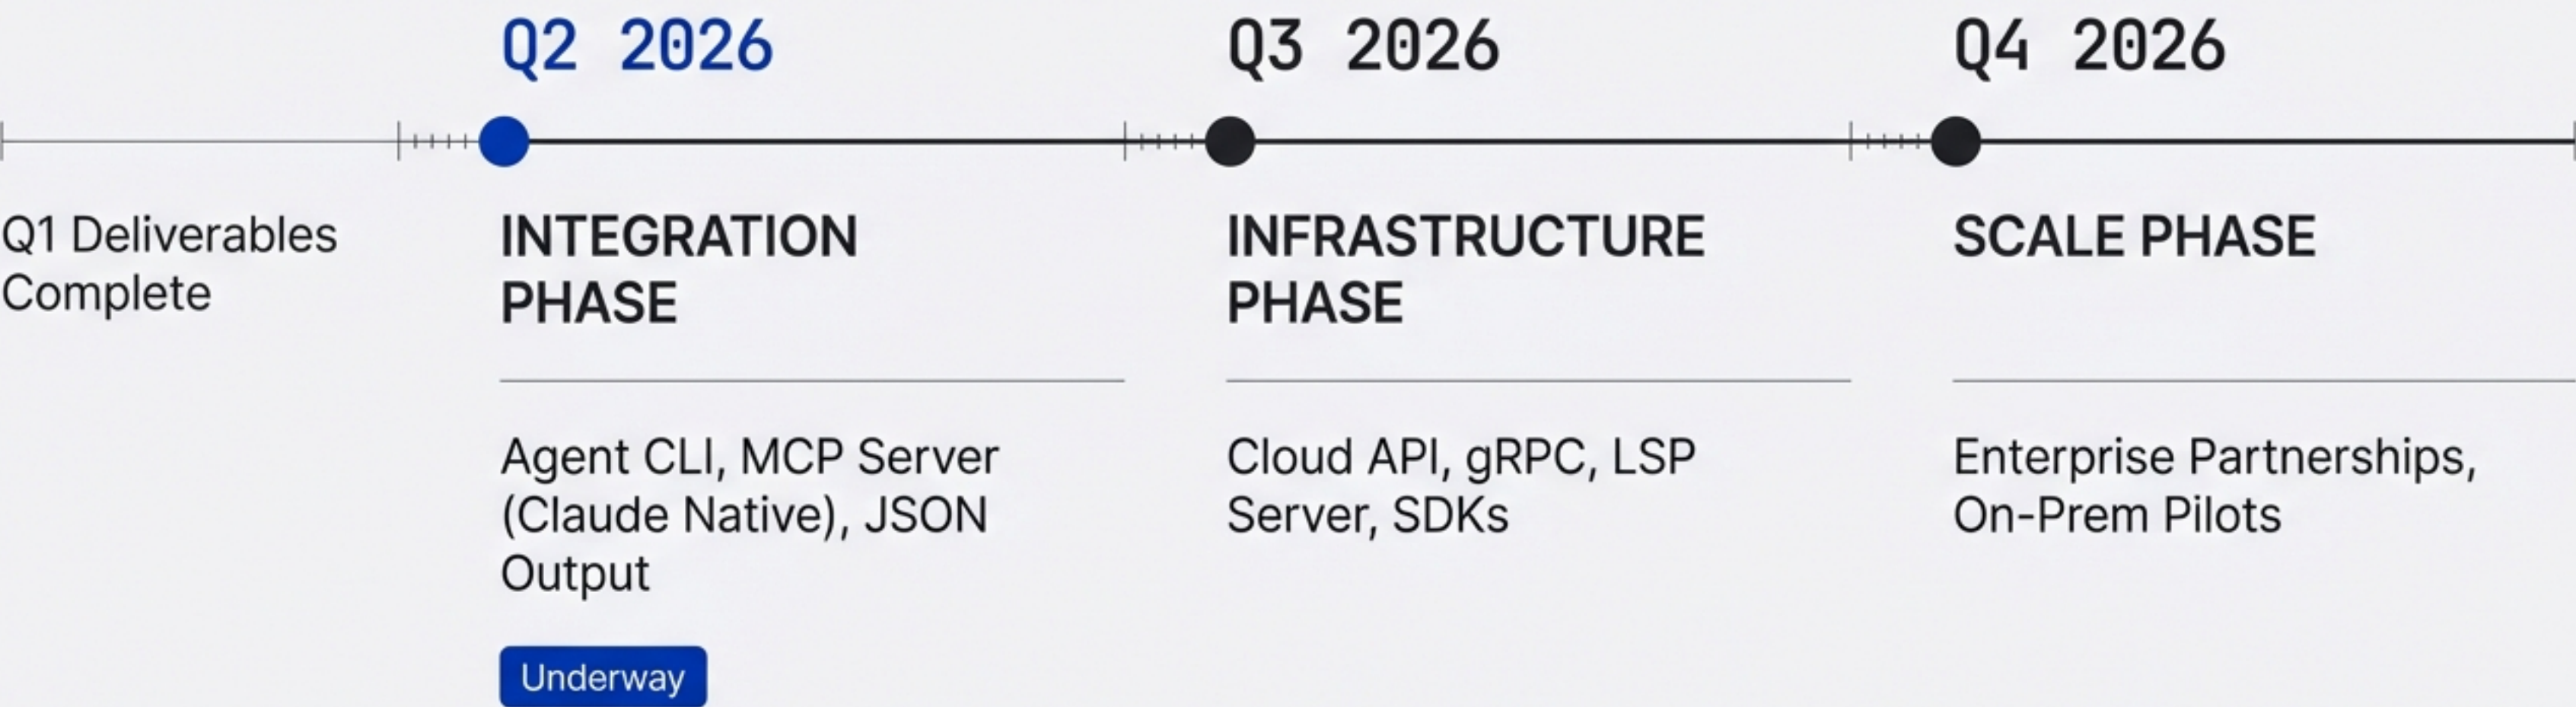

For startup builders

\$50M
Opportunity

Real-World Validation

SpareBank 1	Mynder (Security)	Devin (Autonomous)
5-8x Faster Refactoring	100% Policy Compliance	Rework Reduced 70% → 5%
Managed 400+ microservices via Claude Code + MCP.	Zero security violations via PDF/Doc context ingestion.	Achieved via Synthesis API integration.

Roadmap to Dominance

Q1 Deliverables Complete. Q2 Integration Underway.

The Standard for Agent Context

1. First-Mover Advantage

12-18 month lead on competitors.

2. Technical Superiority

The only solution combining speed, structure, and multi-format support.

3. Proven Value

Validated by Enterprise (SpareBank 1) and Startups (Mynder).

Partner to build the infrastructure of the autonomous age.

Synthesis.

Because Intelligence needs Context.
